Grade	**0.00** out of 10.00 (**0**%)

Question 1 | Incorrect Mark 0.00 out of 1.00

Convert the following algorithm into a program and find its time complexity using the counter method.

```
void func(int n)
{
    if(n==1)
    {
      printf("*");
    }
    else
    {
     for(int i=1; i<=n; i++)
     {
       for(int j=1; j<=n; j++)
       {
          printf("*");
          printf("*");
          break;
       }
     }
   }
 }
```

Note: No need of counter increment for declarations and scanf() and count variable printf() statements.

Input:

A positive Integer n

Output:

Print the value of the counter variable

Answer: (penalty regime: 0 %)

```
1  #include <stdio.h>
2  void f(int n)
3  {
4      int c=0
5      if(n==1);
6      {
7          c++;
8      }
9      else {
10         c++;
11         for (int i=1;i=n;i++)
12         {
13             c++;
14             c++;
15             break;
16         }
17         c++;
18     }
19     c++;
20     print f ("%d",c);
21 }
22 }
23 int main(){
24     int n;
25     scanf("%d",&n);
26     f(n);
27 }
28
```
